## Version: 4.0

Question: 1		
What Maestro component is automatically designated the SMO Master?		
A. The SGM with the lowest member ID (the first one added to the security group.)		
B. The MDS that pushes policy to the SMO is considered the SMO Master.		
C. The first MHO configured is considered the SMO Master.		
D. The SGM with the highest member ID (the last one added to the security group.)		
Answer: A		
Explanation:		
The SMO Master is the SGM that is responsible for synchronizing the configuration and policy with the other SGMs in the security group. The SMO Master is automatically designated as the SGM with the lowest member ID, which is usually the first one added to the security group. The SMO Master can be changed manually if needed. Question: 5	
What is an uplink interface used for?	
A. To connect in between appliances	
B. To connect appliances to customer's infrastructure	
C. To connect Orchestrators to customer's infrastructure	

Explanation:

D. To connect in between Orchestrators

Uplink interfaces are used to connect Maestro Hyperscale Orchestrators (MHOs) to the customer's network infrastructure, such as switches, routers, or firewalls. They are also used to send and receive management and control traffic from the customer's network to the MHOs.
