Version: 18.0

Question:	1

A developer has created an application based on customer requirements. The customer needs to run the application with the minimum downtime. Which design approach regarding high-availability applications, Recovery Time Objective, and Recovery Point Objective must be taken?

- A. Active/passive results in lower RTO and RPO. For RPO, data synchronization between the two data centers must be timely to allow seamless request flow.
- B. Active/passive results in lower RTO and RPO. For RPO, data synchronization between the two data centers does not need to be timely to allow seamless request flow.
- C. Active/active results in lower RTO and RPO. For RPO, data synchronization between the two data centers does not need to be timely to allow seamless request flow.
- D. Active/active results in lower RTO and RPO. For RPO, data synchronization between the two data centers must be timely to allow seamless request flow.

	Answer: A
Explanation:	
Ouestion: 2	

DRAG DROP

An application is being built to collect and display telemetry streaming dat

a. Drag and drop the elements of this stack from the left onto the correct element functions on the right.

IOS-XE Device: IOS-XE Device

Visualization platform

Elasticsearch: Elasticsearch

Kibana: Kibana

data generator

Python Application: Python Application

datastore

Answer:

Explanation:

Kibana: Kibana

Python Application: Python Application

IOS-XE Device: IOS-XE Device

Elasticsearch: Elasticsearch

Question: 3

Questions & Answers PDF Page 4

A cloud	l native	project	is being	worked	on in	which	all s	ource	code a	and o	depen	dencie	s are	writt	en in
Python	, Ruby,	and/or .	JavaScipt	. A chan	ge in o	code tr	rigger	s a no	otificati	on t	o the	CI/CD	tool	to ru	n the
CI/CD p	ipeline														

Which step should be omitted from the pipeline?

- A. Deploy the code to one or more environments, such as staging and/or production.
- B. Build one of more containers that package up code and all its dependencies.
- C. Compile code.
- D. Run automated tests to validate the correctness.

Answer: C	

Question: 4

Which two statements are considered best practices according to the 12-factor app methodology for application design? (Choose two.)

- A. Application code writes its event stream to stdout.
- B. Application log streams are archived in multiple replicated databases.
- C. Application log streams are sent to log indexing and analysis systems.
- D. Application code writes its event stream to specific log files.
- E. Log files are aggregated into a single file on individual nodes.

Answer: AC

Question: 5

An organization manages a large cloud-deployed application that employs a microservices architecture. No notable issues occur with downtime because the services of this application are redundantly deployed over three or more data center regions. However, several times a week reports are received about application slowness. The container orchestration logs show faults in a variety of containers that cause them to fail and then spin up brand new.

Which action must be taken to improve the resiliency design of the application while maintaining current scale?

- A. Update the base image of the containers.
- B. Test the execution of the application with another cloud services platform.
- C. Increase the number of containers running per service.
- D. Add consistent "try/catch(exception)" clauses to the code.

Answer: A
