A. 50%

Version: 7.0	
Question: 1	
Referring to the data protection formula N+M, what does the N stand for?	
A. Number of data stripe units B. Number of protection stripe units C. Number of nodes in the node pool D. Number of nodes the file is striped across	
Answer: A	
Question: 2	
Referring to the data protection formula N+M, what does the M stand for?  A. Number of protection stripe units B. Number of data stripe units C. Number of nodes in the node pool D. Number of nodes the file is striped across	
Answer: A	
Question: 3	
You run the command "isi get -DD /ifs/data/foo.txt" on a 4 node cluster. The displayed res indicate a protection level of 6+2/2. What statement best describes 6+2/2?	ults
A. Protection level of N+2:1; Contains 6 data stripes units and 2 FEC stripe units; Written to 2 dri	ives
per node  B. Protection level of N+2:1; Contains 8 data stripe units and 2 FEC stripe units; Written to 2 driper node	ives
C. Protection level of N+2: Contains 8 data stripe units and 2 FEC stripe units; Written to 1 drive	per
node	per
D. Protection level of N+1: Contains 6 data stripe units and 1 FEC stripe unit; Written to 1 drive node	
node Answer: A	
node	

A. N+2:1 or N+2 have the same amount of overhead. B. N+2:1 will have less overhead. C. I/O optimization should be set to Random. D. I/O optimization should be set to Streaming  Question: 7  The SmartPools settings of your cluster are set to Protection manamanually-managed protection settings is not checked. How can the protection settings be modified?  A. Using File System Explorer in the web administration interface or the B. Only by using File System Explorer in the web administration interface. C. Only by using the isi set command D. Manually starting the SmartPools job	Answer: A  agement: Including File with
A. N+2:1 or N+2 have the same amount of overhead. B. N+2:1 will have less overhead. C. I/O optimization should be set to Random. D. I/O optimization should be set to Streaming  Question: 7  The SmartPools settings of your cluster are set to Protection manamanually-managed protection settings is not checked. How can the protection settings be modified?  A. Using File System Explorer in the web administration interface or the B. Only by using File System Explorer in the web administration interface. C. You are supporting a customer's cluster with 3 node pools consisting nodes, and 30 NL400 nodes. The customer is going to write a large nur node pool. The customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the amount of the customer is very concerned about minimizing the customer	mber of 4MB files to the X400
Question: 6	
	Answer: A
A. 25% B. 50% C. 300% D. 100%	
In a 4-node cluster using N+3:1 protection, how much is the overhead?	
Question: 5	
	Answer: A
C. 200% D. 100%	

Your customer is using a directory for a VMware environment. To which the directory?	access pattern should you set
A. Random B. Concurrency C. Streaming D. Aggregate	
	Answer: A
Question: 9	
The customer has configured a file pool policy on their OneFS 7.0 clust old in the archive tier with a file protection of N+3. The customer atternand protection setting on a file matching the file pool policy criteria usi The file is located on the performance tier and has a requested protection What is the most likely cause of the issue?	npts to verify the file location ing the isi get -DD command.
A. The order of the file pool policies  B. The default policy overrides the file pool policy  C. The AutoBalance job is paused  D. The FlexProtect job failed to complete	
.1181	Answer: A
Question: 10	
You are creating a file pool policy and have chosen to add file matching can be used as file criteria?	criteria to your policy. What
A. Modify time B. Protection level C. File permissions D. File owner	
	Answer: A
